Theories and Concepts of Risk - Single View

Nr.: 641061000 Seminar WiSe 2017/18 2.0 Hours per week in term
Language: englisch
Remarks: Room: UNU 2309
Curricula: Master of Science Geography Environm. Risks (M.Sc.)
Dozenten: [Dr. Matthias Garschagen](#); [Dr. Michael Hagenlocher](#);

	Day	Time	Room	Lecturer	Max	Remarks	Duration
Dates/Times/Location:  	Tue.	14 (c.t.) to 16 woch					from 17.10.2017

application period:
Nachbelegung Geographie 16.10.2017 - 27.10.2017
Anmeldung II Geographie (auch NaLa) 09.10.2017 - 11.10.2017 12:00:00

Description: The lecture aims at introducing and debating key concepts and theories in the field of risk, vulnerability, resilience and adaptation research related to natural hazards and environmental change. Based on guided readings, lectures and open discussions, students will learn about the fundamental conceptual contributions to this field of scholarship, ranging from the early origins to the latest approaches. The lecture shall enable students to not only know and understand the field's basic concepts and their respective theoretical underpinnings, but to apply this knowledge in scientific debates and the framing of own research concepts. Students shall further be able to transfer and link the debated concepts and the underlying paradigms of risk management / risk governance to the current policy frameworks for applied risk reduction and adaptation (e.g. Sendai Framework, SDGs, New Urban Agenda). From this combination, students shall be enabled to develop their own critical reflection on scientific risk concepts as well as their applicability for practical risk reduction initiatives.
